Bassey Ekpenyong

AI & PRODUCT BUILDER | WEB3 & DIGITAL FINANCE | COMMUNITY LEADERSHIP

basseyekpenyong248@gmail.com | Abuja, Nigeria | linkedin.com/in/bassey-ekpenyong | btcbarbie.github.io/basseyonline

PROFESSIONAL PROFILE

Independent technology builder with experience across Web3 and crypto ecosystems, online community leadership, decentralized finance education, and AI-powered product development. Participated in Layer 1 and Layer 2 ecosystems and DePIN projects, and organized online conventions introducing young people to decentralized finance. More recently, focused on building AI-enabled products and prototypes, using AI-assisted development workflows and modern deployment tools. Recognized with the Kredete Financial Inclusion Award and a first-place AI Alytics Hackathon Award. Interested in roles where technology, digital finance, product execution, and user needs intersect.

CORE SKILLS

Web3 & Crypto Ecosystems • DeFi Education • Community Management • Online Event Hosting • Team Coordination • AI-Assisted Product Development • Workflow Automation • Product Prototyping • Python • GitHub • Supabase • Railway • Vercel • AI Coding Tools • Digital Communication

PROFESSIONAL EXPERIENCE

Independent Web3 & Crypto Community Builder *2020–2025*

- Participated in Web3 and crypto ecosystems spanning Layer 1 and Layer 2 networks, DePIN projects, and decentralized finance initiatives, including Jupiter, Sui, GRASS, and Nodepay.
- Built and managed online communities, including a WhatsApp community of approximately 1,000 members and a Telegram community of approximately 200 members.
- Organized and hosted online conventions to teach young people about decentralized finance and Web3 concepts.
- Coordinated community activity and supported member engagement across fast-moving digital-asset ecosystems.
- Built an online presence across two TikTok accounts, with audiences of approximately 19,000 and 3,500 followers respectively.

Independent AI & Product Builder *2025–Present*

- Build AI-powered products and prototypes, using AI-assisted development workflows to move from problem definition to working software.
- Develop and iterate on projects including Tally, Standby AI, TrustLedger, and CoTreasury.
- Use Python, GitHub, Supabase, Railway, Vercel, and AI coding tools in product development workflows.
- Participate in hackathons to test ideas, build under time constraints, and demonstrate technology-based solutions.
- Maintain a project portfolio with examples of independent software and product work.

SELECTED PROJECTS

Tally | *AI / group-finance product project*
Built as a shared money-tracking concept for groups, supporting contribution targets, commitments, payment tracking, and receipt-related workflows.

Standby AI | *AI product project*

TrustLedger / CoTreasury | *Digital finance / group treasury project*

AWARDS & HACKATHONS

Kredete Financial Inclusion Award — Winner, GOMYCODE Build with AI Hackathon; $500 prize (TrustLedger, September 2026).
AI Alytics Hackathon Award — First-place winner (Tally AI, August 2026).
PayPal AI Hackathon — Participant.

TOOLS

Python • GitHub • Supabase • Railway • Vercel • AI coding assistants and workflow tools
